## DETAILED ACTION

### Preliminary Amendment

1. The Preliminary Amendment dated October 10, 2003 has been entered in the above-identified application. Claims 3 and 4 have been amended. **Claims 1-4 are now pending.**

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Mackawa (US 6,217,176 B1).

Mackawa discloses an antiglare film for use on the surface of displays for high definition images such as CRT and liquid crystal panels (Column 1, lines 4-6). The antiglare film comprises a transparent substrate film and an antiglare layer stacked onto the transparent substrate film, the antiglare layer being formed of a light transparent resin containing two or more types of light transparent fine particles (Column 2, lines 42-48). The light-transparent resin may be an ionizing radiation cured resin and the two or more types of transparent fine particles have a particle diameter of 1 to 5 microns (Column 2, lines 63-68) and these may be monodisperse organic fine particles (Column 3, lines 1-3). The particle diameter is not less than 1 micron and not more than 5

microns (hence the particle size distribution represented by Formula I and II is met). The film-forming component used in the ionizing radiation curable resin contains an acrylate functional group (Column 5, lines 14-16). All limitations of claims 1-4 are disclosed in the above reference.
